Continuation of 11. does NOT place the application in condition for allowance because: applicant generally argues the rejection made under 35 USC 112, first paragraph (pp 4 - 5).

The Office disagrees.

Specifically, limitation 'A' recites the transference of data units specified by a mapping. The accompanying support cited by the applicant discloses transforming data. The level of detail required by the claim does not rise to the level disclosed in the specification. Thus, the specification does not enable one to make and/or use the claimed invention.

Next, limitation 'B' recites that each location comprises a horizontal position and a vertical position in which the horizontal position has an uppermost position or lowermost position and the vertical position has a left most position or a right most position. Again, the accompanying support cited by applicant discloses that it takes four types of location elements to determine a single position of a data unit. It apperas yet again that applicant has the benefit of hindsight and some years when drafting the ammeded claims that was not apparent or available at the time of the originally filed specification.

Lasty, limitation 'C' recites that each data unit is defined based on a number of options including a string. The cited protions of the specification, however, disclose that data units mainly consist of five types - text, single line, multi line, block, and iterator. Applicant appears to make the biggest leap in this comparison. Further, applicant seems to argue that because the specification discloses that the invention should not be limited to the above five types of data units and that any data units for data locating may flexibly be incorporated when needed; then, the applicant can claim any type of data unit with any limitation.

Applicant generally argues the above three limitations as they are rejected under 35 USC 102.

The Office disagrees.

It should first be noted that absent enablement and guidance from the specification, the office was forced to rely on the knowledge generally known to one of ordinary skill in the art in rejecting the claim limitations especially A, B, and C. To that end, the Office maintains that the reference anticiaptes the claim limitations with applicable sections cited in the fianl rejection in such much as could be understood in light of the rejections under 35 USC 112.
